(54) Title: POSITION COMMUNICATION METHOD AND APPARATUS

(57) **Abstract:** A wireless communication apparatus and network including voice transmission means characterized in that there is included a location position determination means adapted to output data which uniquely characterises a geographic location of the apparatus, and means adapted upon an initiation of a close of a voice transmission from said apparatus to effect transmission of data arising from the position determination means whereby such data can effect an identification of the said location which can be interpreted by further receiving means. There is included a wireless network base station adapted to receive, during termination of a signal being received from a mobile station, data identifying the location of the mobile station.
